CYBER FOR OPERATIONAL TECHNOLOGY (OT) TACTICAL DOMINANCE

A step-by-step roadmap to identify and eliminate cyber threats
Cyber for Operational Technology (OT) Tactical Dominance is a Vectrus Information Technology & Network Communication Services solution that provides a cybersecurity assessment of customer facilities to eliminate known and unknown vulnerabilities. Observations are transformed into a custom roadmap to eliminate cyber threats to your organization.

THE CHALLENGE
The surface for cyber attacks is huge. There are over 20 billion devices connected to the Internet of Things (IoT). With so many points of vulnerability, it is nearly impossible for organizations to secure all its end points. Ongoing coordination is needed across these potential attack surfaces.

THE SOLUTION
Vectrus employs our unique set of cyber tools and processes to provide a cybersecurity assessment of your facilities to eliminate vulnerabilities. We have partnered with the best commercial real estate operational technology experts to evaluate buildings, identify exposure, and ensure that interorganizational communication and engagement drive the best possible outcomes. We transform findings into actionable data: a custom roadmap that outlines steps to resolve issues compromising security at your facilities.

Vectrus uses the following tools and processes to eliminate cyber threats to your organization:

• **The Cyber Scorecard.** Vectrus uses the Cyber Scorecard to evaluate current cyber practices in your facility, identify threats to security and efficiency, and provide recommendations for improvement. We examine every system connected to your network that has the potential to compromise security.

• **Organizational Communications Evaluation.** Comprehensive cyber protection is a team effort. Your civil engineering, technology, and third-party teams need strong communication processes during both normal operations and crisis situations. Vectrus evaluates your organization’s communication practices and offers strategies to protect your facilities from cyber threats.

• **Cyber Roadmap.** Our team produces a custom cyber roadmap for your organization that illustrates best practices for eliminating identified threats and prevents your facilities’ network from being compromised. The roadmap outlines identified issues and corresponding resolutions, and is designed to help your organization maintain effective cybersecurity throughout your facilities.

THE BENEFITS

• Identifies known and unknown cyber threats.
• Improves network security and helps eliminate potential security breaches.
• Safeguards sensitive information and brand reputation.
• Evaluates and recommends improvements for organization communication processes.
